

Aqua-Hort®

Gartneriet Vestervang, Beder, Denmark use Aqua-Hort

Jens-Aage Nielsen, the owner of Gartneriet Vestervang is a famous grower of Hedera Helix varieties. This has been the one and only crop in the nursery for more than a generation. The nursery covers 8000 m².

In late 2011 a major disease problem developed in his propagation area. This led to the installation of an Aqua-Hort in spring 2012. Dosing with 4 ppm on the cuttings. Watering by spray boom.

The outcome of the Aqua-Hort installation is very good. After 8 weeks application is the growth rate back to the good old standards. Young plants can again be transferred to the finalization areas after 7 weeks. During the disease period it took much longer time and many losses occurred. There are now no more crop losses.

Jens-Aage Nielsen is most willing to share his Aqua-Hort experiences with people from the industry. Please contact me for an appointment.
