## Florpagano, Ruvo di Puglia, Italy use Aqua-Hort

Several of the big pot plant nurseries in the Umbria region of South Italy use Aqua-Hort. One of them is Florpagano, which has used the system since 2009. Florpagano was started by Antonio Pagano in the late sixties. It has developed into an very impressive 14 ha production complex, where a variety of pot plants are produced. Orchids and Anthurium forms a big portion of the production. A cash-and-carry department serve local traders, also with bought-in plants.

**The Aqua-Hort installation is a tank model with an 200 amp, 48 Volt control unit. It is installed after the central DGT-Volmatic fertilizer mixer serving most of the nursery.**

**The outcome of the Aqua-Hort installation is very good indeed. Mr. Pagano mentions that after the Aqua-Hort installation there has been no more fungus and bacterial problems in the nursery. He is very pleased with the system, and plans to install two more units in associated nurseries.**
