

Aqua-Hort®

Metrolina Greenhouses North Carolina USA use Aqua-Hort

Metrolina Greenhouses is a major producer of potplants for the US market. The heated growing area covers 141 acres (59 ha), and is continuously being expanded.

Metrolina Greenhouses has since 2002 used Aqua-Hort to prevent fungus and bacterial problems. The water is drawn from an outside water reservoir, being treated and fertilizers added, before entering the greenhouses.

The Aqua-Hort Installation at Metrolina Greenhouses

The Aqua-Hort installation consists of three treatment tanks, running parallel, drawing up to 200 cubic meter per hour. The controls yield max. 400 amp. Voltage ranging from 0 to 48 VDC. The installation allows for two more tanks.

The US Aqua-Hort Agent Lars Marohn is available for questions about this installation.
